Senior Frontend Engineer and Accessibility Specialist with 7+ years of experience building scalable, high-performance, CMS-driven web platforms. Deep expertise in HubSpot CMS/CRM, React, Next.js, and modern frontend architecture, with a strong focus on web accessibility, performance, and usability at scale. Proven technical leader and architect, trusted to guide complex migrations, mentor developers, collaborate cross-functionally, and deliver measurable improvements in engagement, conversion, and operational reliability.

SKILLS

Frontend & Web Platforms:

JavaScript, TypeScript, HTML5, CSS3, React, Next.js, Vue, Nuxt, AngularJS

CMS & APIs: HubSpot CMS & CRM, ButterCMS, REST APIs, GraphQL, Apollo Client

Accessibility & Performance: WCAG, ARIA, Web Accessibility Audits, Performance Optimization, Core Web Vitals

Tooling & Workflow: Git, Node.js, NPM, Code Reviews, Documentation, AI Developer Tools

CERTIFICATES

IAAP CPACC (2023)

HubSpot Certified CMS Developer (2025)

EXPERIENCE

Senior Software Developer / Technical Architect

New Era Technology — Remote | 2021-Present

- Serve as senior frontend engineer and technical architect across multiple enterprise client engagements, specializing in HubSpot CMS/CRM, React, Next.js, accessibility, and performance optimization.
- Led the architecture and development of a high-volume, server-side rendered Next.js platform integrated with ButterCMS, delivering 30+ reusable, accessible, and highly performant UI components used across multiple client sites.
- Acted as technical architect for a large-scale WordPress-to-HubSpot migration (~2,000 pages), defining theme architecture, migration strategy, accessibility standards, performance guidelines, and SEO considerations to ensure long-term scalability and continuity.
- Designed and implemented complex HubSpot CMS solutions including custom modules, HubDB-driven resource libraries, API-powered content aggregation, and dynamic page generation to support scalable content authoring workflows.
- Led accessibility initiatives across client projects, including WCAG-compliant navigation systems, complex mega menus, accessible forms, and dynamic interfaces, validated through both automated tooling and manual assistive-technology testing.
- Established and executed accessibility audit methodologies, and curated a centralized accessible component library (70+ components) to enable consistent, high-quality UI development across teams.
- Built and optimized HubSpot CRM workflows and automations processing hundreds of thousands of records daily, improving operational reliability, lead capture, and monitoring of critical business systems.
- Regularly conduct deep code reviews and architectural reviews, providing actionable feedback on performance, accessibility, maintainability, and scalability, and mentoring peers on frontend best practices.
- Partner closely with designers, content teams, SEO stakeholders, and client leadership to identify risks early, align technical decisions with business goals, and deliver accessible, high-impact web platforms.
- Recognized internally with an award for outstanding technical contributions, leadership, and collaboration.

EXPERIENCE (CONT.)

Freelance Web Developer

Travel Software Company — Remote | 2023-2024

- Built pixel-perfect, interactive React components from Figma using Next.js and Material UI.
- Converted ~20 static pages into dynamic GraphQL-powered interfaces, improving data interactivity and maintainability.

Head of Product / UI Developer

Periodic — Bloomington, IN | 2019-2021

- Progressed from UI Developer to Head of Product at a SaaS startup, leading cross-functional initiatives spanning frontend engineering, UX, backend collaboration, and customer-facing strategy.
- Owned the design and development of a custom in-app CSS editor with validation and versioning, significantly reducing engineering time spent on client customization requests.
- Led the design and delivery of a custom multi-language and terminology system, enabling customers to fully control booking-site content across regions without relying on automated translations.
- Directed a complete API documentation redesign, benchmarking against industry leaders (e.g., Stripe), mentoring a junior developer, and reducing customer onboarding and support overhead.
- Improved performance and usability of a high-traffic admin dashboard by eliminating memory leaks, consolidating API calls, and redesigning UI flows, resulting in faster load times and fewer support tickets.
